Carrie Connors  
Head of Research  
Prosthenics  
3703 Forbes Ave  
Pittsburgh, PA, 15213

Dear Carrie,

As a recent graduate of Penn State with a B.S. in Chemistry majoring in biochemistry, I'm applying for the position of clinical research associate with Prosthenics. I developed a particular passion for the interaction of electrodes with biological tissue and clinical research skills which I am confident can contribute to Prosthenics' increasing focus on neuroprosthetics. I believe I can help with implementing cutting edge prosthetic solutions as a clinical research associate whilst continuing to expand my knowledge in the field. Working with you would be an incredible first step in my research career, as in my opinion you're the gold standard in this profession.

In addition to my required course work, I volunteered as a lab assistant in my university's biochemistry research facility where I had the privilege to work with leading lights in the field of bionics. I worked on a broad range of research projects such as creating a bionic hand electrode that improved nerve signal efficiency by 50%.

This opportunity excites me more than I can say. Your reputation in the field of bionics is unequalled and the developments led by your team are consistently world first. Your dedication to improving the lives of people who use prosthetics is incredible and perfectly reflects my own passion for this field of research.

Could we arrange a call to discuss how my experience working with biosignal sensors could contribute to your goal of continually optimizing performance in prosthetics?

Best Regards,

Jim Munson
